Map-Based Geolocation of a Camera

Goal: Make a webinterface to load a map and use it to geolocate the camera and detected objects.

Techniques: HTML, CSS, JavaScript

Context: For users of surveillance equipment, it is of utmost importance to know where objects are located.

Siqura B.V. is located in Gouda and provides advanced video surveillance solutions including IP cameras, video encoders, network video recorders, fiber equipment, video management and video-content analysis (VCA) software.

Contact information: Send your application to Anne van Vossen (a.vanvossen@tkhsecurity.com) and Julien Vijverberg (j.vijverberg@tkhsecurity.com), or visit www.siqura.com.
